

FLAGSTAFF MEDICAL CENTER MRI REMODEL

Installation of the MRI required extensive coordination with facility stakeholders to ensure patient and staff safety, as well as uninterrupted operations.

Location: Flagstaff, AZ

Markets: Healthcare

Loven Contracting completed a successful remodel of the MRI and Ultrasound Suites at Flagstaff Medical Center. This project included removal and replacement of the existing MRI imaging machine with new technology, as well as MEP and structural upgrades to the MRI suite and adjacent Ultrasound facility for functionality and finishes.

Removal and replacement of the sensitive MRI equipment required the use of a crane. Working hand-in-hand with Flagstaff Medical Center staff, Loven Contracting developed a dynamic site safety plan for the use of this equipment on the active and occupied campus.

Project included construction of a new roof opening for use during this MRI installation and for future equipment upgrades.
