

GUARDIAN MEDICAL TRANSPORT STATION 52

Loven Contracting partnered with Northern Arizona Healthcare to construct the 15,700SF facility.

Location: Flagstaff, AZ

Markets: Healthcare

In partnership with Northern Arizona Healthcare (NAH), Loven Contracting constructed Guardian Medical Station 52. Standing two-stories tall and over 15,700SF, this facility includes:

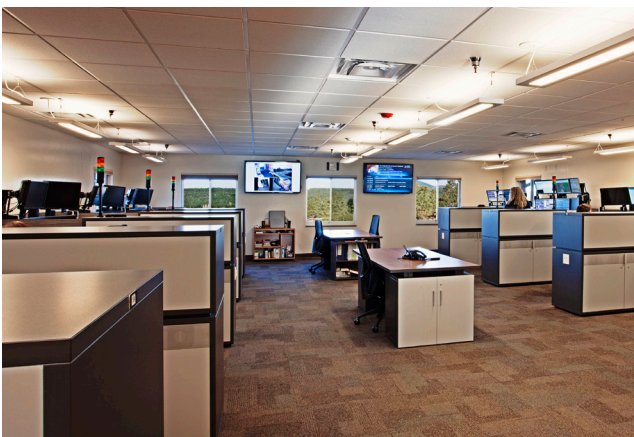

- 4,710SF of office space;
- 896SF of training area;
- Nine (9) crew quarters for on-duty personnel;
- Twelve (12) emergency vehicle storage bays;
- A state-of-the-art call center; and
- One (1) off-site detention basin.

This project was a ground up build during the winter. Masonry and concrete were constructed to protect from freezing during installation. Temporary covers and heaters were placed in areas being installed and maintained in the enclosures 24/7 to prevent the materials from freezing.

The project design utilized a round roof system. Layout and computer modules were utilized for the installation of the wall anchors, top of wall anchors, and mechanical/plumbing/electrical/sprinkler installations. The roof panels were bent by a portable machine on site to match the arch.

There are twelve vehicle storage bays on-site.

The Guardian Medical Transport Station features a state-of-the-art call center.
