

HIGHLANDS FIRE STATION

Loven Contracting partnered with Highlands Fire District to construct a 4,000SF addition to their administration building as well as new headquarters for the Bear Jaw Wildfire Hand Crew.

New conference facilities within the addition double as a community meeting space.

New Bear Jaw Wildfire Crew quarters offer a much needed upgrade for staging and gear maintenance.

Location: Flagstaff, AZ

Markets: Government & Municipal | Tenant Improvements & Remodels

Loven Contracting worked with Highlands Fire District on the Design+Build delivery of a 4,000SF Fire Administration Building addition to the existing Fire Station and a 2,400SF Pre-Engineered Metal Building for the Bear Jaw Wildfire Hand Crew.

Construction took place during a heavy monsoon season, requiring 8-foot over-excavation, fill, and compaction to prepare the site. During construction, our team identified a leak in the fire loop as well as drainage challenges that were causing failure of the surrounding pavement. Loven Contracting mitigated these issues via a 3' over-excavation and substrate rebuild to support heavy vehicle traffic. By completing this concurrently with the original scope of work, this enabled our client to achieve meaningful savings and we completed the project on-schedule.
