

METEOR CRATER MULTI-PHASE REMODEL

The Meteor Crater Visitor's Center is a truly unique experience in the desert of Northern Arizona. Through strategic upgrades to their Phillip Johnson-designed facility, the project owners have significantly improved both visitor and staff experiences. Key to the success of this project were uninterrupted operations, maintaining the revenue streams for this key employer.

Location: Winslow, AZ

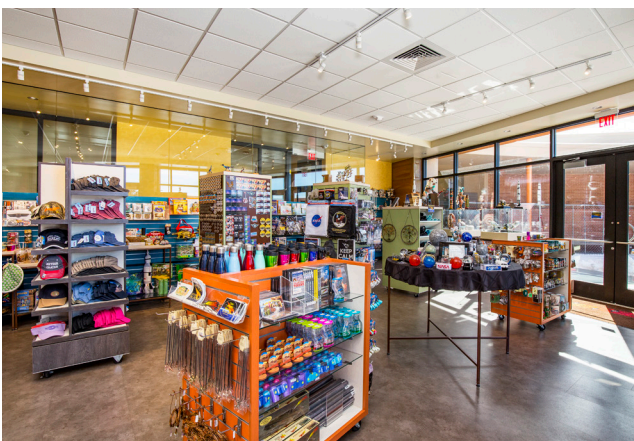

Markets: Commercial | Hospitality & Entertainment | Tenant Improvements & Remodels

Loven Contracting completed a 3,000SF addition in conjunction with interior and exterior renovations of the Meteor Crater Visitor Center in Winslow, Arizona. Originally designed by renowned architect Phillip Johnson and constructed on the site of a meteor impact berm in 1961, the revitalized visitor center features a contemporary lobby, reception area, gift shop, retail and ticketing center, as well as landscape and hardscape enhancements to improve visitor circulation.

Loven Contracting developed management and safety plans that allowed for minimal impact on business functions and visitor experiences. Throughout the entire project, Meteor Crater remained open to the public, enabling visitors to this Northern Arizona landmark to enjoy the site unimpeded.

The original ticketing windows for this attraction were located outdoors - foul weather or high winds had a significant impact. Loven Contracting worked with the design team to enclose the original ticketing area in a new welcome lobby, sheltering guests from sun and snow alike.

The New Meteor Crater Gift Shop provides a bright and airy environment for customer browsing.
