

PHYSICIAN'S LOUNGE

The Physician's Lounge serves as a quiet space with food service, dining, and workspace areas that promote comfort and privacy for healthcare providers.

This Design + Build project transformed the existing space into a comfortable and relaxing environment that encourages workplace efficiency.

Pre-prepared meals are made readily available on the induction warmers, enabling staff flexibility and meals on-the-go as needed.

Location: Flagstaff, AZ

Markets: Healthcare | Tenant Improvement & Remodel

The new 2,310 SF Physician's Lounge provides healthcare providers with extra support and a quiet space for decompression away from public areas of the hospital. This Design + Build project transforms the existing space through warm colors, clean finishes, and lodge-type design. Located next to the facility's ICU unit, all construction on the physician's lounge took place in short duration during scheduled non-quiet hours and was coordinated through careful scheduling and clear communication with hospital staff.

Combining the work space, lounge, food service area, dining, tele-health space, lactation room, IT room, space for team meetings, and rest area with the central location of the Physician's Lounge on the campus facilitates quality, convenience, and comfort for the healthcare professionals. Other features include wall-mounted TVs, two refrigerators and a display fridge, and induction warmers for grab-and-go meals.
